

SEM Keychain Proximity Tags

Security without having the hassle of having to carry your access card wherever you go

Security always involves inconvenience because there is an authentication procedure in place to ensure that only bona fide persons are allowed entry into an office, condominium, factory or any other secured installations.

There is always a trade off between security procedures and end-users convenience. A majority of end-users has to be put up with the inconvenience to carry a bulky proximity access card to enter installations secured by RFID proximity card access systems.

The **SEM proximity tags** are programmable tags which are configured to **replace certain type of RFID proximity cards**. *They are designed to be attached to the key chain of the end-users or to be used as a key chain.* The programmable chip is encased in a robust plastic tag which can withstand the wear and tear of continuous use.

Currently there are numerous encoding formats used by various RFID reader systems. We will make a site visit to check whether the encoding format of the readers of the end-user is supported by the proximity tag prior to selling it to the end user.

These proximity tags are covered by a 1 year warranty against manufacturer's defect and it will be replaced on a one to one basis during the warranty period.

Minimum order amount is 10 pieces and quantity discounts will be given to orders exceeding 50 pieces.
